PSYCHOLOGICAL IMPACT OF VACCINATION: 20 PERCENT REDUCTION IN DEPRESSION AND ANXIETY DISORDERS

OCTOBER 25

2021

Studies have shown that depressive mood and anxiety disorders, which occur in the pandemic, are reduced by 4 to 20 percent in people who have received the COVID-19 vaccine. Making evaluations on the subject, **Clinical Psychologist Ünal Erdem Elli** says that this situation is related to “a person’s feeling about themselves and their environment”.

According to a study conducted at the University of Southern California, it has been found out that after receiving the COVID-19 vaccine, people are less likely to feel very depressed by 15 percent, and are less likely to feel only mildly depressed by 4 percent. Based on the data, the researchers also estimate that 1 million people are likely to experience a reduction in mental distress after

being vaccinated. Making evaluations on the subject, Istanbul Gelisim University Department of Social Services Lecturer and Clinical Psychologist Ünal Erdem Elli says, **“One of the most fundamental conflicts of human beings from the moment they are born is about whether the outside world and the people around them are safe. These basic and critical conflicts have been triggered since the beginning of the pandemic. People find themselves in an environment where they are already insecure and vulnerable to threats from other people. We see that they start to show more intense complaints in anxiety and depression-related disorders. A lot of research today has shown us that anxiety and depression-related disorders are starting to emerge more intensely than before the pandemic.”**

THINGS TO KNOW

ABOUT NEW CORONAVIRUS

All necessary measures are taken for the **coronavirus** revealed in Turkey and the World at **Istanbul Gelisim University**. **Things to know about coronavirus are as follows:**

What are the new coronavirus symptoms?

- The most common symptoms are **fever, cough and respiratory distress**.
- In severe cases, **pneumonia, severe respiratory failure, kidney failure and death** may occur
- Incubation period is between **2 and 14 days**.

How is the virus transmitted?

- It can be transmitted by the contact of the droplets caused by **coughing and sneezing** with the contact of the **mouth, nose and eyes** of other individuals in certain environment and by touching the surfaces where the droplets adhere and taking hands **into the mouth, nose or eyes**.

What to do to be protected from the virus?

- When **coughing or sneezing**, the mouth and nose should be covered with a **disposable tissue**, if there is no handkerchief, the mouth should be closed with the **upper sleeve or elbow**, not with the palms.
- **Handshaking and hugging** should be avoided.
- **Mouth, nose and eyes** should not be touched with dirty hands.
- Hands must be washed for **at least 20 seconds** in accordance with the **Handwashing Instructions** found in the toilets. In the absence of water and soap, **alcohol-containing hand antiseptics** should be used. **Cologne of 70-80 degrees** also serve as disinfectants.
- Offices and classrooms must be **ventilated hourly**.
- Places frequently used by many people such as common areas and door handles should be **disinfected every 2 hours**.
- Hands **must be washed** after using **public transportation**.
- Because the virus progresses faster in people with low immune system; **a balanced and healthy diet** is required. Foods **must be washed thoroughly** before consumption.

What to do if there are symptoms?

- If you have come from countries with infections **in the past 14 days**, apply to the **nearest healthcare facility** by wearing **a surgical mask**.
- If you are **coughing, have a fever and have difficulty at breathing**, apply to the **nearest healthcare facility** by wearing **a surgical mask**.
- **Always wear your mask** when you are in the same room with **a person who is recommended insulation** at home.

PROTECTION AGAINST VIRUS IS IN OUR HANDS

THE MOUTH AND NOSE SHOULD BE CLOSED WITH PAPER TOWEL DURING COUGHING AND SNEEZE. IF YOU DO NOT HAVE ANY WIPE, THE INSIDE OF THE ELBOW SHOULD BE USED.

CLOSE CONTACT SHOULD AVOID LIKE HANDSHAKE AND HUGGING.

IT SHOULD BE STAYED AWAY FROM CROWDED ENVIRONMENTS.

DO NOT TOUCH THE MOUTH, NOSE AND EYES WITH DIRTY HANDS.

HANDS MUST BE WASHED WITH WATER AND NORMAL SOAP FOR AT LEAST 20 SECONDS.

ALCOHOL CONTENT HAND ANTISEPTICS SHOULD BE USED IN CASE OF THERE IS NO WATER AND SOAP.
