USING DRONE IN STOCK CONTROL PREVENTS MAKING MISTAKES

MAY 31

2022

Evaluating the use of drones, which paves the way for the delivery and stock control technologies of the future, **Asst. Prof. Dr. Kadir Mersin** stated that the use of drone applications in stock control reduces the error margin to zero during the operation.

Drones, also known as Unmanned Aerial Vehicles, are used in many areas from cargo delivery to search and rescue activities during the Covid-19 pandemic. Asst. Prof. Dr. Kadir Mersin, a faculty member of the Logistics Management Department at Istanbul Gelisim University, indicated that drones, which started to be used in package delivery, particularly in the 21st century, also play an active role in counting goods in warehouses.

BEWARE IF YOUR CHILD IS 3 YEARS OLD AND STILL CANNOT ABLE TO SPEAK!

MAY 30

2022

Stating that the neurological development in babies should be observed carefully, Child Neurology Specialist **Prof. Dr. Ebru Kolsal** also emphasized children with speech delay should be evaluated in terms of hearing disorders as well.

Beware if your child is 3 years old and still cannot able to speak!

The neurological development of children is as significant as their physical development. While the weight and height gain of babies are regularly monitored during growth periods, their neurological development can sometimes be ignored. Speech ability, which is another important part of neurological development as well as the development of the child's head

control, sitting and walking is among the factors of great importance. Children should be closely monitored in this regard. When it is noticed that there is a development of speech below expected, the expert should be consulted quickly and the underlying cause should be determined.
