About the Report

Realizing the Sustainable Development Goals necessitates intention and strong will for developing global partnerships and cooperation. Partnerships for goals herewith is one of the most important headings.

Istanbul Gelisim University undertakes towards the development of partnerships as a university holding the vision of sustainability, understanding the importance of building and developing partnerships for having students, academic and administrative staff reached this vision.

The purpose of hereby this report is to provide a summary of partnership studies of Istanbul Gelisim University in the achievement of reaching the Sustainable Development Goals.

Coordinator's Message

“Partnerships for the Goals”, which is the 17th one of the Sustainable Development Goals, is a collective call for action underlining the need to establish partnerships for

passing on a liveable future to the next generations in the fulfilment of all other Sustainable Development Goals.

It will be likely only by global partnerships and collaborations to establish an open, fair, and all-encompassing system within universal rules in the world. Regarding the achievement of sustainable growth and development, the contribution to be made by universities, which are the center of science regarding the practices for climate action under education and health, fighting against inequalities and environmental sustainability, is undeniable in addition to capacity increasing applications such as sharing ideas, supporting innovation, strengthening and expanding technological knowledge.

In today's world, in which the idea that economic development will bring social development along with it is no longer applicable, the problems result in both human reactions and an awakening action. With the vision of sustainable development, Istanbul Gelisim University undertakes to take its responsibility to build a sustainable future by supporting this action.

Asist. Prof. Aslihan Guzin SELCUK, FHEA

Community Service Office Coordinator

Sustainable Environment and Community Research and Development Centre Director

Acknowledgement

We owe a debt of gratitude to valuable academics, administrative unit managers and officers, students of our university and internal and external stakeholders, who have contributed to the content of Healthy and Quality Life Report.

Community Service Coordination Office

Introduction

In these new times when higher education costs are increasing and competition is very high, it is almost unlikely for the higher education organizations, not following and performing innovative ideas, not generating values contributing to the society, to become successful and even to survive in the long term across the world.

Accordingly, developing innovative values and contributing to the environment in sociological, ecological and economical respects through universities is of critical importance for societies in nowadays, when the reasons for the existence of higher education organizations are questioned again. For this reason, it is one most important strategies accepted for universities to communicate with their environment and to do interactive works in order to achieve universal information and convert this information into a useful experience by processing it. In this regard, after participating in the international platforms, it is likely for universities to become important actors and one of the leading organizations only by these effective strategies that they develop. Attaching importance to regional and transnational diversity, establishing cooperation with industry, public and civil institutions, developing common innovative values by communicating with other higher education organizations are the most beneficial regarding resource allocation and are of paramount importance for sustainability policies.

The details of the cooperation of Istanbul Gelisim University in 2019 regarding research and education needs are reported below after being classified into a certain category.

1. Academy-Academy Partnerships

As in every academic organization in the international platform, Istanbul Gelisim University also desires to increase its effectiveness in the internationalization effort and to expand its cooperation. In this respect, it establishes cooperation and signs protocols with international universities to increase international student diversity, to make exchange between quality and experienced academic members, to carry out international education programs effectively, to obtain universal knowledge easily, to let the circulation of knowledge and experience, to conduct comprehensive research and to strengthen international relationships.

Our academics and students carry out many joint projects within the academy-academy partnership by using communication and cooperation opportunities in their study fields. In this regard, our academics have opportunity to generate scientific

studies which will contribute to sustainable development goals, and our students support to achieve related goals by various projects.

Istanbul Gelisim University provides hardware support to any project, patent and utility model obtained as a result of research studies of its academics and students. Our university provides financial support to all its students regarding their project ideas that contribute to the sustainable development goals they develop through cooperation after an evaluation process. This support undertake can be accessed in the following link;

<https://aday.Gelisim.edu.tr/aday-ogrenci/projeler-ve-oduller>

Istanbul Gelisim University has signed a total of 162 bilateral cooperation agreements, 118 of which is concluded by European universities, for its academics and students. You can find a list of university cooperation, which are valid during 2020.

2. Global Partnership Areas for Sustainable Development

The Community Service Coordinator of Istanbul Gelisim University has collected its activities within Partnerships for Global Goals under 5 main headings by considering the framework established by Sustainable Development Goals Assessment Report prepared by the Department of Strategy and Budget of the Republic of Turkey and the dynamics of the

SUSTAINABLE DEVELOPMENT GOALS

ENTREPRENEURSHIP

2.1. Partnerships for Capacity Building and to Support Entrepreneurship

Istanbul Gelisim University has been concluding various cooperation agreements so that the students receiving sustainability education can participate in labour force, and students can use the information they have obtained regarding sustainability in the private sector. This practice is also considered a great opportunity for companies to access the labour force working in the field of sustainability and therefore to develop their capacities in this field.

In this regard, the contracted private companies in the list receive technical and administrative consultancy from our academics and managers on sustainable business under this agreement, and carry out capacity building studies.

You can below find a list of private companies, of which protocol is valid during 2020, providing our students with this opportunity. The number of all private companies cooperated is 134.

The cooperation of the students having education on sustainability in this field in line with healthy and quality life goal with public institutions is of paramount importance for mentality transformation of these organizations. In this respect, our university has a comprehensive cooperation network in the education field so that our students, who are specially educated to ensure sustainable transformation in the field of health, can practice their knowledge. Many of the important institutions in the Republic of Turkey are contributed under our studies carried out to make a contribution to capacity

building of the public institutions and organizations operating at municipality and education in addition to health.

You can below find a list of capacity building and knowledge sharing cooperation made with 43 public institutions and organizations, of which protocol is valid during 2020.

Istanbul Gelisim University considers non-governmental organizations an important stakeholder in the achievement of sustainable development vision. Today, the non-governmental organizations are significant actors contributing to policy generation, guiding public and carrying out projects in the achievement of sustainable development goals. After the concept of global civil society has become widespread, the non-governmental organizations, which were initially operating as voluntary organisations, have needed institutionalization especially in issues, such as effective access to funding sources, coordination of volunteers and project management.

In addition to the quantitative increase of non-governmental organizations, the transformation of these institutions in qualitative respects has resulted in the need for the development of effective management and control systems in terms of organizational structure, financial resources and human resources. In order to promote the sustainability of the Non-Governmental Organizations based on voluntariness, Istanbul Gelisim University shares its facilities and knowledge with the Non-

Governmental Organizations applying to it and supports them by need based programs to develop their capacities.

You can find below a list of capacity building cooperation made with 15 non-governmental organizations, of which protocol is valid during 2020.

In 2019, in addition to the afore-mentioned cooperation, 36 private companies carried out studies to develop their capacities in the field of sustainable business by receiving research, consultancy and education services from Istanbul Gelisim University within

the scope of increasing the capacity of the private sector by producing new information in partnership in education, support, industry and technology.

Apart from the agreements made with the institutions, the valuable academicians of our university have supported the sustainable development of the country by providing consultancy services to many private enterprises, public enterprises and non-governmental organizations within the scope of issues such as developing sustainable business capacities of institutions, supporting entrepreneurial activities and institutionalization. In this context;

- Prof. from the faculty members of Istanbul Gelisim University. Dr. Anton AbdulBasah Kamil contributed to capacity development by receiving many invitations from institutions.

Subject : Invitation as a Keynote Speaker

To:
Prof. Dr. Anton Abdulbasah Kamil
Professor of Econometrics
Istanbul Gelisim University, Turkey

Dear Prof. Anton,

On behalf of the School of Industrial Engineering Telkom University, we would like to invite you to be one of the keynote speakers in the Studium Generale "Statistical Logistics Business".
The Studium Generale to be held on:

Number : T/61203/IT2.EK.1.1.3/TU.00.01/2020 7th October 2020
Subject : Invitation as a Guest Lecturer

Dear : Prof. Dr. Anton Abdulbasah Kamil
Foreign Academician at Faculty of Economics Administrative and
Social Sciences, Istanbul Gelisim University, Turkey

On behalf of Department of Business Statistics Faculty of Vocation, Institut Teknologi Sepuluh Nopember (ITS) Surabaya, Indonesia, I am glad to invite for online Guest Lecture with title of "Measurement of Efficiency Using Parametric and Nonparametric Method" and will be held on:

Day, Date : Thursday, 15th October 2020
Time : 09:00 – 11:00 Turkey Time
(Equal to 13:00 – 15:00 Western Indonesia Time)
Place : Online via ZOOM Meeting Application.

Case : Invitation Letter as Guest Lecturer at Department of Statistics
Diponegoro University

To: Prof. Anton Abdulbasah Kamil
Faculty of Economics, Administrative, and Social Sciences
Istanbul Gelisim University

Dear Prof. Anton Abdulbasah Kamil

We are pleased to invite you to be one of the guest lecturers on the Visiting Professor Program at Department of Statistics, Faculty of Science and Mathematics, Diponegoro University. The program will be held via on-line at October 26, 2020.

• Within the scope of the RESLOG project, in which our university participated, it was aimed to support the capacity development of municipalities in their work on immigrants and refugees. Within the framework of the Information Ground Development Activities carried out, a 12-series book series was published with Local Governance and Migration Meetings within the MBB Migration Policy Center. The authors and compilers of the publications, which have a comprehensive framework from the legal and financial dimensions of migration to intercultural communication, from good practice examples to the experiences of living together by Turkish municipalities, came together at the 18 December 2020 International Migrants Day, Local Governance and Migration Meeting.

<http://www.reslogproject.org/yerel-yonetisim-ve-goc-dizisi-yazarlari-uluslararasıgocmenler-gununde-bir-araya-geldi/>

- One of the faculty members of Istanbul Gelisim University, Dr. Assistan Professor Yahya Can Dura participated in the Communication Economy and Organization workshop with 230 participants from 27 countries.

• Istanbul Gelisim University, Vocational School Occupational Health and Safety Department faculty member Dr. Gufte Caner Akın, Sarp Yacht Manufacturing Industry. Trade A.Ş, Birlik Kimya San. Trade Ltd. Sti, Silverring Makina Metal San. Trade Ltd. Sti, Silverring Makina Metal San. Trade Ltd. Sti, Karaca Deri San. Trade Ltd. Sti , Ozerdem Celik San. Trade Ltd. Sti , Su Marine Yacht San. Trade Ltd. Sti, Marecon Muhendislik Hiz. Trade Ltd. Sti. provided consultancy services to companies. In this context, he also carried out studies on the design of environmental engineering services.

In addition to these studies, IGU Technology Transfer Office, the unit of Istanbul Gelisim University carrying out studies on establishing cooperation with public and private sector, protecting the information and inventions produced under intellectual property and putting them into practice regarding R&D and innovation, provides consultancy services to students, academics, industrialists and entrepreneurs on patents, utility models, brands and industrial design. It also gives technical support in evaluation of inventions, application process tracking, agreement management and licensing. What is more, it provides services, such as market research, patent and utility model valuation under commercialization activities.

Within the scope of incorporation and entrepreneurship services, with its academics, graduates and students, Istanbul Gelisim University provide many services to the entrepreneurs, industrialists and investors with R&D projects and innovative ideas in order to create and expand an entrepreneurship culture at the University and between the stakeholders related to the University, to develop new programs related to entrepreneurship, thus to increase entrepreneurship, to establish Spin-Off companies, to ensure the foundation of the companies developing technology-based products. The project proposals of the entrepreneur candidates with an innovative product and/or production method idea are evaluated at the pre-incubation center and suggestions are provided.

Intellectual Property Rights (IPR) corporate policy, incentives given to academics who makes an invention and whose invention is patented, protection, registration and commercialization of IPRs, the share of IPR income between Istanbul Gelisim University and inventors, TTO, where studies on how to use the IPR revenues of Istanbul Gelisim University are also carried out, are primary structures supporting the corporate capacity.

In order to support entrepreneurship and to provide added value to the economy of our country, our university declares clearly its support to its graduates and students. In this regard, it supports its graduates, setting up their own business, by providing them with the first furniture of their office as a present and supports them in these entrepreneurship initiatives. You can find the afore-mentioned statements by the following links:

- <https://Gelisim.edu.tr/duyuru/ogrencilerimize-buro-mobilyasi-imb%C3%A2ni>
- <https://Gelisim.edu.tr/haber/genc-girisimcilere-Gelisim-universitesi'nden-mujde!>

Technology Transfer Office of Istanbul Gelisim University creates an added-value by its robotic studies and by increasing production based on industry. The projects related to advanced level robotic studies are carried out at the Technology Transfer Office, and these advanced robotic studies have proven themselves in many national and international robot competitions. Moreover, many significant projects were developed in the robotic sector. These studies were represented in the best manner by participating in fairs, events and promotion days organized on the basis of national and international innovation.

GLOBAL OBJECTIVES FOR
SUSTAINABLE DEVELOPMENT

ISTANBUL GELISIM
UNIVERSITY
SUSTAINABLE DEVELOPMENT
OBJECTIVES

TECHNOLOGY
DEVELOPMENT AND
R&D

ISTANBUL
GELISIM
UNIVERSITY

2.2. Partnerships for Technology Development and R&D Support

As the importance attached to technology, R&D and innovation have increased in accordance with National Science, Technology and Innovation Strategy, increasing technology and innovation activities in a private sector-oriented manner, commercialization of research results and increasing the competitiveness of our country with branded technology-intensive products are among our main goals specified by our country.

In this regard, the main goal of Istanbul Gelisim University is to increase the support given to technology, R&D and innovation studies and to support the cooperation and joint study culture in this field in accordance with the 11th Development Plan.

In accordance with this goal, the researchers and academics of Istanbul Gelisim University develop national and international projects while our research and application centres, aiming to produce knowledge and value as well as to conduct quality research and publication to transform these productions into economic added value, contribute to this vision by establishing partnerships and cooperation with other research institutions at home and abroad. In order to fulfil all these activities, there are 21 Research and Application Centers at Istanbul Gelisim University.

You can find information about these projects and activities carried out by the aforementioned cooperation.

- Evaluation of Energy Systems Security in the Scope of Cyber Security

Today, the increasing dependency on Information and Communication Technologies (ICT) and especially the Internet in energy systems has made it necessary to provide cyber security in these systems. Cyber security incidents that may occur in information technologies used in energy systems; It includes the risks of stopping and disrupting energy services, causing large-scale economic damage, disruption of public order, loss of life and even endangering the national security of countries. The purpose of this research; To draw the general framework of the concepts of cyber security in energy systems, to investigate the cyber attacks against energy systems, to reveal the importance of cyber security in critical infrastructures managed with SCADA, especially in energy systems infrastructures, and to make suggestions for increasing current awareness on this issue. The descriptive method was used in the research. The information obtained in the research is that providing cyber security in energy systems is of vital importance. Among the suggestions made in the study, it was especially

emphasized to use national cyber security information technologies and products, which were designed and tested by accredited domestic security consultancy companies that have passed national cyber security tests and have national certification, especially in the energy sector in Turkey.

- Identity Analysis and Notification System on People Diagnosed with Covid-19 with Erel Binary Patterns Histograms

It is aimed to develop a different system from other face recognition systems by adding functionality to face recognition systems used in many fields today. Recently, with the Covid19 pandemic, curfews and the difficulties in controlling these bans have been taken into account and this system has been developed in order to reduce them. A study was conducted in which an e-mail can be sent to the authorized person or persons after the person with a diagnosis of Covid-19 registered in the data set in the system was viewed by the camera after he went out on the street. In the designed software, face recognition is performed first by detecting the face with the Haar-Cascades classifier and then using LBPH (Local Binary Patterns Histograms). This process is done by tagging each pixel of the introduced image by mapping it to other pixels around it. This labeling result is converted to binary number system and stored. It tries to recognize the face by comparing the images taken from the camera in real time with this number. In the classification process, if the person was previously registered in the data set, it is framed in "red" color. If the classification is not registered, it is enclosed in "green" colored frames. The purpose of this is to distinguish between a person with a diagnosis of Covid-19 and a healthy person. The success of the applications performed on the software was measured as 90% and the error as 10%.

- Accuracy Estimation and Analysis of the Model Developed on Faster R-Cnn Convolutional Neural Network with Deep Learning Methods: Object Detection Application

Deep learning, which hosts many subjects such as object recognition, image processing, and estimation, has become the need of human being day by day. In this study, object recognition is performed using deep learning techniques. The "Glass" dataset, which was developed using the Faster R-CNN (Faster Region Based Convolutional Networks) network and contains 502 images in the study, was created. One part of this data set was used for testing and the other part for training purposes. After observing in which ways he could recognize the glass by doing different experiments, suggestions were made on how to increase the accuracy estimation rate. An interface with web cam options where we can take photos, videos and instant images while doing object recognition has been designed. While designing the interface, the Tkinter library, a Python library, was used. If the image for which the object will be detected is a photograph, after the operations, the top of the object is

framed and a photograph is recorded with the correct guess at what percentage. If the image to be detected is a video, it will be written what percentage the object on the video is estimated in frame while the video is playing, while the web cam will keep the object in the image in the frame and display it on the screen. In this study, which was carried out using the Object Detection API, it was tried to train the model with different epoch values and find the epoch value that predicts with the most accurate ratio. It was carried out using deep learning and Faster R-CNN on the data set created on 18 different experiments. In order to find the most successful prediction rate in the training process, experiments were carried out with different epoch numbers. As a result of the total 100,000 epoch training, the success result is 0.97835 and the loss rate is 0.02165.

- Establishment of an Electronic Spraying/Irrigation System with a Hexacopter Unmanned Aerial Vehicle

In the thesis study, whose name is mentioned, a hexacopter that can provide autonomous flight with six rotors was created, and an automatic spraying or irrigation system adaptation designed in line with the created mechanism was carried out. In line with this integrated system, the data of the test flights carried out by the spraying or irrigation hexacopter, which can perform six-rotor flight, were obtained, and in the light of these data, it was stated that the result of the study was reached. In the created system, autopilot module (STM32F427 Cortex M4 core) is used to perform normal flight or autonomous flight. Thanks to this module used, AC motor controls in the system, processing of radio control signals and reading telemetry data are realized.

The software of the autopilot in the created system was implemented on the ArduPilot platform, and the most suitable parameters were determined on this platform in line with the tests carried out. In line with the determined parameters, all data during the flight can be monitored instantly via the radio control equipment, that is, the remote control. In addition, since Hexatar, which is integrated with the ArduPilot program, has sensors such as GPS, altimeter, and barometer, all data received from these sensors (position, altitude, direction of travel) can be followed on the ArduPilot program.

- Design, Analysis and Production of an Electric Jet Engine Air-to-Terrain Navigation Missile with the Help of a 3D Printer

With the development of unmanned aerial vehicles in recent years, many of the developed countries have started to replace the existing warplanes in their defense industry inventories with unmanned warplanes. New ammunition needs have arisen for unmanned aerial vehicles, which have just begun to enter the inventory of countries. The technical features of unmanned aerial vehicles, which are different from existing warplanes, prevent the use of existing ammunition. Especially the limited useful load carrying capacity and low cruising speed of these new aircraft make it necessary to produce new ammunition. In this thesis, a cruise missile design with a working system that can be compatible with the unmanned aerial vehicles in our country's inventory and which is not in the inventory of any country has been made.

The hull of this cruise missile was produced entirely by using a 3D printer. An electric fan motor is positioned to provide thrust to the cruise missile. In addition, fins powered by servo motors to determine direction and a flight controller to control these motors have also been added. The system works entirely with electrical energy. The battery feeding the main system and the safety button, a second battery powering the electronic equipment and a second safety switch are integrated into the fuselage of the missile. The body consists of 4 blocks and can be manually disassembled and reassembled without the need for any joining element.

- Design, Analysis and Production of a Bi-Axis Food Liquid Pouring Machine with and without Machining

- In the culinary arts, where people's talent is needed, it is aimed to reduce the workforce and reduce the error to zero with the help of technology. In this period, when 3-axis printers became widespread, machines that can print many materials instead of plastic are now produced. In the thesis, it is aimed to produce more serial and less faulty products by using a two-axis system in the food industry with this machine, without the need for work skills. In the first part of the thesis, literature review is included, in the second part, the design of the engine, liquid flow unit and mechanical part used in the system is included. In the third section, the software part is included, and in the fourth section, experimental tests of this designed machine with machining and chipless production were carried out. The working states of the coordinates (x, y) and the liquid flow unit sent by the computer interface in real time on the designed machine are processed with the microcontroller software. The software is discussed in two parts. It is a microcontroller software that will provide control by an interface in a computer environment and a computer interface created. The computer interface design was designed using the c# (c sahrp) language on the Visual Studio 2017 platform. Arduino software was also used in the design of the microcontroller software. The machine sends the drawings made with the mouse on the computer interface or the previously saved *.PANKEK file extension pancake data to the microcontroller from the serial port communication point where the microcontroller card is connected to the computer. According to the data in the incoming file, the mechanical structure with the pancake liquid reservoir activates the air pump and transmits the liquid towards the gate. It provides the desired shape to the user by transferring the liquid to the heated table in two axes by taking action with stepper motors. These operations are done with a card with an ATmega328 microcontroller. The mechanical structure of the machine has an arm movement on the first axis, linear bearing-bearing shafts, while the second axis has a casting mouth supported by a belt system. Compared to similar projects, its single-arm structure

provides convenience when taking and placing the heating plate and during intervention to the user.

- Test drives of the flying car 'Tusi', the construction of which was started in 2018 by Turkish engineers at the Technology Transfer Office (TTO) at Istanbul Gelisim University, began in the open field. The vehicle called 'Tusi' can be charged in 2.5 hours and stay in the air for 9 minutes. Links to the news in the press are given below.

<https://tto.gelisim.edu.tr/sayfa/sirketlesme-ve-girisimcilik-hizmetleri>

- The project is one of the important projects of the Technology Transfer Office. Halis Kuralay, Deputy Provincial Director of the Ministry of Family and Social Policies, and his team came to visit the Technology Transfer Office and exchanged ideas and found the project successful.

- Both the disabled and normal people were interviewed for the relief guideways, and it was observed that they caused trips and falls on the walking paths. In addition, it was concluded that the probability of slipping increases on some roads in winter. The purpose of the invention is a system that will enable visually impaired people to find

their way more easily during their walks in order to do their daily work in indoor or outdoor areas. In this way, it is aimed that they can easily find their way without the need for the help of other people, thanks to the walking stick, which is laid on the ground without the danger of getting stuck on any relief on the ground. The possibility of slipping and falling can be completely eliminated by sticking an adhesive sandpaper surface on the magnetic sheet. With this project, participation has been shown in the Turkey with Patents competition organized by the Turkish Patent and Trademark Office.

- The machine and its software, which shapes the dough in 2 dimensions, are designed as a two-axis machine that provides drawing with edible dough on a computer-designed hot plate, and interface software that provides control. Designed with the desktop software written specifically for the machine, the drawing designed on the computer interface is poured into the cooking area using two axes and cooked. Personalized products increase their preference in today's service sector. The aim is to create a product in which, thanks to the interface and the machine, operators can offer a crepe of their own design to their customers. The first design was successfully implemented. It continues to be developed by adding new features.

SUSTAINABLE DEVELOPMENT GOALS

MAKING POLICY

2.3. Partnerships for Contributing to Policy Making

Contributing to the general policy making in achieving sustainable development goals is the sole responsibility of universities, acting as science centers. In this context, the contributions of Istanbul Gelisim University to policy production under various topics of sustainability in 2019 are summarized below.

- Istanbul Gelisim University is the strategic partner of the Erasmus Plus Key Action: Cooperation for Innovation and Exchange of Good Practices KA204 Strategical Partnership for Adult Education titled as “New Opportunities of Employment For Social

Inclusion of Women With Disabilities” project numbered as ES01-KA204-05076 that was carried out under the coordination of FAMS COCEMFE Sevilla from Spain and with the participation of 10 different organizations from 7 European countries. The Turkish delegation of the Project, that started in October 2018 and will last 30 months, is represented by Research Support Unit Coordinator Melike Cetin and Instructor Firat Demirkol. In this project it is aimed to provide women with physical and sensory disabilities with new opportunities and innovative tools to improve their qualifications and therefore their employability. Please find the link of the project web page below;

<http://www.readywomen.eu/index.php>

- Istanbul Gelisim University is the strategic partner of the Strategic partnerships in the youth field of Erasmus + KA205 titled “Sharing Experiences Against Exclusion and Discrimination (SEED)” project numbered 2019-3-FR02-KA205-016677, which is carried out under the coordination of Lycee Technologique Pierre de Coubertin from France and with the participation of different organizations from Italy and Spain. The Turkish delegation of the project, which started in 2019 and makes a contribution to the development of policies against discrimination, is represented by Research Support Unit Coordinator Melike Cetin and research assistant Tugce Gur Turkdogan.
- ISTANBUL, (Dogan News Agency)- The demands and wishes of young people interested in sports were discussed at the "Sports Workshop in Academic and

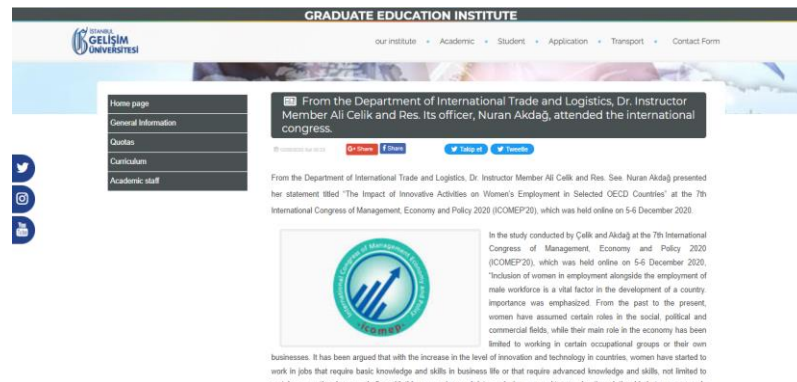

"Real Sector Cooperation" organized in cooperation with Basaksehir Municipality and Istanbul Gelisim University (IGU). Abdulkadir Gayretli, Chairman of the Board of Trustees of IGU, drew attention to the importance of sports workshops held in order to determine the needs of the youth and the industry.

In the workshop attended by many academicians and physical education vocational school students, the demands and wishes of young people interested in various sports were discussed and solutions were sought.

- Istanbul Gelisim University Dr. Assistant Professor, Ali Celik and Research Assistant Nuran Akdag contributed to policy development with their study titled "The Effect of Innovative Activities on Women's Employment in Selected OECD Countries".

• Diler Ezgi Tarhan, lecturer at Istanbul Gelisim University, contributed to policy design with the Women and Alienation study within the scope of the Congress of Women and Politics in the Global World.

• Firat Baranaydın, a faculty member at Istanbul Gelisim University, contributed to policy making with his work on the restoration of historical textures.

• Professor Sacide Vural, Lecturer in the Department of Public Relations and Publicity, Faculty of Economics and Administrative Sciences at Istanbul Gelisim University, worked as an Evaluator in the Quality Board of the Faculty of Arts and Sciences, and as the Vice President of the Quality Board in the Communication Researches Quality Board Association, and carried out studies on blending quality culture with sustainability studies.

• Emerging Innovation Trends in Logistics and Transportation during the Covid-19 Pandemic Period: Istanbul Gelisim University faculty member Safiye Top contributed to policy making in the field of sustainable cities with her work on the 2020 Innovation Awards Review.

- Tariq ElHadary, a Professor Assistant at Istanbul Gelisim University, has carried out an important study that will contribute to the purpose of partnerships for sustainability with his study on sustainability and stakeholders.

- Istanbul Gelisim University School of Applied Sciences, Aircraft Maintenance and Repair Department Asst. Prof. Tamer Saracyakupoglu made a contribution to the policy making on sustainable transportation with his membership in Aviation Turkey and JRESM Advisory in 2019.
- Gerontology Departments Advisory Board and Elderly Care Technician Programs Advisory Board were established with the contributions of Istanbul GeliSim University, and the job description of gerontologists was prepared in cooperation with the Ministry of Health and the assignment file was completed.

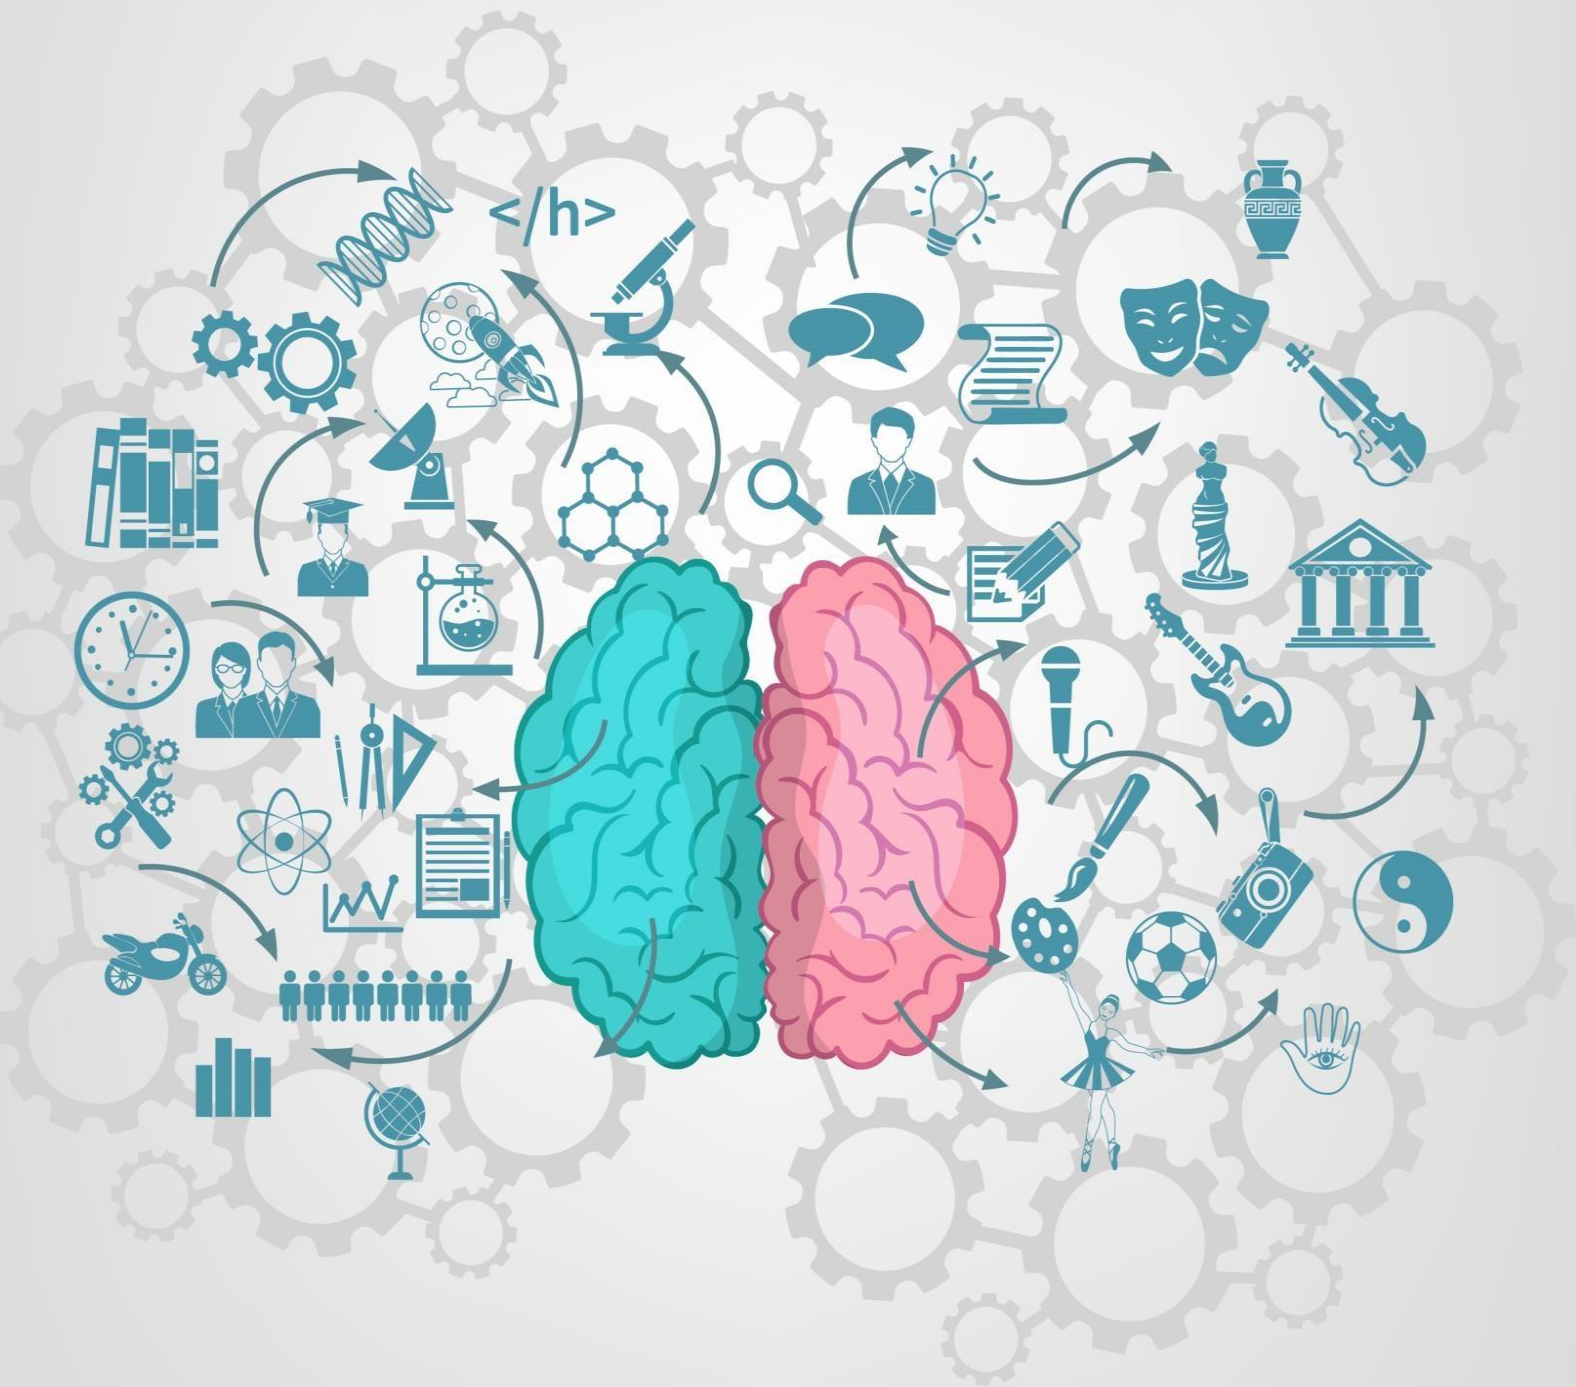

ASSOCIATIONS FOR PARTNERSHIPS

IGU for "Ecological, Social and Economic Sustainability"

INCREASING THE INFORMATION CAPACITY

2.4. Partnerships to Increase Knowledge Capacity Towards Sustainable Development Goals

Developing and sharing a common knowledge capacity in achieving sustainable development goals is of great importance to carry out studies with partners.

Within this framework, information with regards to the partnership activities carried out by Istanbul Gelisim University for the aim of increasing the knowledge capacity towards sustainable development goals are provided below.

- Digital content for security measures implemented in cooperation with Pegasus Airlines and the General Directorate of Civil Aviation contributed to the field.

<https://www.ntv.com.tr/video/turkiye/ucakta-tehlike-aninda-ucakta-yapilmasi-gerekenler-ntv-muhabiri-uzmaniyla-konustu,rdENoTJaHEqf-qB4KRqM0A>

<https://www.dha.com.tr/istanbul/ucakta-kaza-oncesi-ve-sonrasinda-neler-yapilmali/haber1753492>

- Istanbul Gelisim University, Faculty of Engineering and Architecture, Department of Industrial Engineering Prof. Dr. Tarık Cakar served as the "project manager" of the project titled as "Investigating Occupational Tension and Stress in Working Life in Istanbul" within the scope of Scientific Research Projects Application and Research Center (BAPUM) and made a contribution to the production of knowledge aimed at decent work and economic growth.
- Within the scope of the cooperation between Istanbul Gelisim University Graduate Education Institute and Istanbul Metropolitan Municipality, the foundations of studies in the field of sustainable cities were laid.

2020

"This webinar has been organized by Vocational School of Applied Sciences, Department of Public Relations and Advertising Students; Seval Bektasoglu, Anil Anar, Gulcihan Yilmaz, Berra Sever, Yusuf Antil and Center for Gender Studies"

They said “your beauty, your choice” in the period of social isolation!

With the partnership of Istanbul Gelisim University School of Applied Sciences Department of Public Relations and Advertising, and Center for Gender Studies, an awareness project called "Your Beauty, Your Choice" has been launched online in order to draw attention to the forced beauty perception created on women during the social isolation period.

07.06.2020 / 16:03

"It was a time when everyone was equal and free."

With the partnership of Istanbul Gelisim University, School of Applied Sciences, Department of Public Relations and Advertising and Gender Studies Center, the "Your Beauty, Your Choice" awareness project was launched online on June 4 to draw attention to the forced perception of beauty created on women during the social isolation period.

- The issue of violence was discussed in the project carried out in cooperation with Istanbul Gelisim University and trauma specialist Gulbahar Eda Erbas, and work was carried out within the scope of awareness towards violence.

<https://ubyo.gelisim.edu.tr/bolum/halkla-iliskiler-ve-reklamcilik-103/haber/sosyal-izolasyondoneminde-%E2%80%98E2%80%98-seyirci-kalma->

Within the scope of the project realized in cooperation with Istanbul Gelisim University Ayse Aydın Akademi and Medsatek Medical Health Technologies, an applied workshop in the field of healthy aging was held.

In addition to the studies provided, some cooperation projects have been carried out the esteemed academicians of our university with various organizations and organizations to enhance the information capacity on sustainable development targets.

The list showing the projects of the academicians who made a contribution to is shown in Table 5.

CLIMATE ACTION AND SUSTAINABLE ENVIRONMENT

ISTANBUL
GELISIM
UNIVERSITY

GLOBAL OBJECTIVES FOR
SUSTAINABLE
DEVELOPMENT

2.5. Partnerships Towards Climate Action and Sustainable Environmental Policies

Prioritizing the productive and sustainable use of natural resources, the environmental policy of Istanbul Gelisim University is grounded on avoiding the problem at its source and bringing the life standards to the highest level. Furthermore, as supporting economic development and ensuring the rational management of natural resources concurrently leaving a sustainable world to future generations will be possible with the resolutions by the cooperations to be enhanced in this field.

In this regard, information regarding the partnership activities conducted by Istanbul Gelisim University to enhance the information capacity on climate actions and sustainable environmental policies is shown hereinbelow.

- A member of Istanbul Gelisim University, Faculty of Dentistry Lecturer Dr. Edibe Egil has participated in the 1002 TUBITAK Project titled as “Effect of Grape and Grape Seed Extracts Obtained from Different Grape Varieties Grown in the Black Sea on Dentin Remineralization” as a Researcher/Specialist and made a contribution to the development of sustainable agricultural practices.
- A member of Istanbul Gelisim University, Faculty of Engineering and Architecture, Civil Engineering Dr. Teaching Assistant Anil Nis and Mukhallad Mohammed Mawlood AL-Mashhadani has participated in the “Determination of Mechanical and Durability Properties of Sustainable Geopolymer Composites with Waste Concrete Aggregate Additive” project with FBA-2019-3558 number as a Researcher and made a contribution to the development of sustainable construction standards.
- A member of Istanbul Gelisim University, Faculty of Engineering and Architecture, Civil Engineering Prof. Dr. Mustafa Karasahin has participated in the “Effects of Collaborative Vehicle Dynamics on Traffic Flow Modeling: Simulation and Control” project with TUBITAK 1001, 120M576 number as a Researcher and has worked on sustainable transport and made a contribution to the reduction of carbon emissions.
- A member of Istanbul Gelisim University, Faculty of Engineering and Architecture, Civil Engineering Asst. Prof. Ahmad Reshad Noori has

participated in the "Dynamic Analysis of Layered Composite Thick Circular Plates in Laplace Space Using Complementary Functions Method" project as a coordinator and made a contribution to the field.

- A member of Istanbul Gelisim University, Faculty of Engineering and Architecture, Civil Engineering Asst. Prof. Anil Nis has participated in the "Determination of Mechanical and Durability Properties of Sustainable Geopolymer Composites with Waste Concrete Aggregate Additive" project as a Researcher and made a contribution to the development of sustainable construction standards.

- A member of Istanbul Gelisim University, Faculty of Engineering and Architecture, Civil Engineering Asst. Prof. Anil Nis has participated in the TUBITAK 1001" Detection of Alkali-Silica-Reaction in Geopolymer and Cement-Based Structures by Using High-Precision Non-Destructive Microwave Metamaterial Sensors and Study of Water Reaction Mechanisms in Geopolymer Structures" project as a Researcher and made a contribution to the development of sustainable construction standards.

- A member of Istanbul Gelisim University, Faculty of Engineering and Architecture, Civil Engineering Asst. Prof. Anil Nis and Asst. Prof. Mukhallad Mohammed Mawlood AL-MASHHADANI who is a member of Istanbul Gelisim University, Faculty of Engineering and Architecture, Civil Engineering have participated in the the "Examination of the Durability Performance of Different Geopolymer Mortar Samples Produced with Waste Materials under the Influence of High Temperature" project as Coordinators and made a contribution to the development of sustainable construction standards.

- A member of Istanbul Gelisim University, Faculty of Engineering and Architecture, Civil Engineering Asst. Prof. Mukhallad Mohammed Mawlood AL-MASHHADANI has participated in the "Determination of Mechanical and Durability Properties of Sustainable Geopolymer Composites with Waste Concrete Aggregate Additive" project as a Researcher and made a contribution to the development of sustainable construction standards.

GLOBAL OBJECTIVES FOR SUSTAINABLE DEVELOPMENT
