NEWS**Armenia switched to terror policy****OCTOBER 6****2020**

Speaking about the intense missile attacks to Tovuz, Shamkir, Ganja, Goranboy, Naftalan, Mingchevir, that are far from the conflict zone and also Terter, Beyleqan, Aghdam, Berde regions close to the conflict zone in Karabakh in Azerbaijan, Sociologist and International Relations Specialist Bahlul Aliyev (PhD) emphasized that international law was violated, and added: "Having suffered a heavy blow at the front, Armenia, unable to get the international support it hoped for, started a terrorist policy."

Stating that Armenia, which ignited the fuse of the conflict in the region, started to target civilian settlements with repeated blows on the front, Dr. Aliyev from Istanbul Gelisim University said: "These attacks are particularly versatile and

aim to confuse the target, but also to destroy the strategically important places of Azerbaijan. For example, Mingachevir is the energy city of Azerbaijan, and it contains the biggest water reservoir of the Caucasus with a volume of 16 billion cubic meters. Hydroelectric power plant, which is vital for Azerbaijan, is located in the region. Previously, the Armenian side made threats from different media that they would blow up the Mingachevir dam and drag the region into disaster. The fact that one of the missiles hit the plant's close proximity to an energy block and did not detonate by chance is an indication that Armenia did not have its share of the morality of war along with its lawlessness. As for the bombing of the city of Ganja considering the many historical buildings in the city it shows that Ganja is one of the cultural centers of Azerbaijan and that Armenia did not give up its vandal attitude towards civilization as in the 90s."

The feeling of prevention triggers the tendency to violence

OCTOBER 7

2020

The tension triggered by the COVID-19 epidemic among patients, relatives and other healthcare professionals increased the violence against healthcare professionals. Clinical Psychologist Ünal Erdem Elli, who evaluated the fact that the rates of violence in health reached the highest level of the last 11 years in the first 6 months of 2020, said: "During the pandemic process, an increase is observed due to the emergence of feelings of frustration in people in general."

The Family Medicine Workers Union (AHESEN) announced that the rates of violence in health reached the highest level in the last 11 years in the first 6 months of 2020. Violence in health is most common in family health centers and emergencies that provide primary health care. Clinical Psychologist

Ünal Erdem Elli, who made a statement on the subject, stated that people tend to violence as a result of the feeling of frustration, "People learn that they have lost their relatives without seeing them, this is an angering situation in itself. There is an experience in which people cannot reach their relatives and feel blocked. In our statements on violence in general, we say that prevention is an important trigger."

Faculty member of IGU won "the best paper" award

OCTOBER 7

2020

Assoc. Prof. Dr. Shehzad Ashraf Chaudhry, faculty member of Istanbul Gelisim University (IGU) Computer Engineering Department, won the 'best paper' award with his paper titled "Rapidauth: Fast Authentication for Sustainable IoT" presented in the conference titled 'Forthcoming Networks and Sustainability in the IoT Era' (FoNeS-IoT) in October.

Of the 40 applications made to the conference organized by EAI, a non-profit organization and professional community established in cooperation with the European Commission to strengthen global research and innovation and to promote cooperation between the European and International Information and Communication Technology (ICT) communities, only 37% were accepted.

THINGS TO KNOW

ABOUT NEW CORONAVIRUS

All necessary measures are taken for the **coronavirus** revealed in Turkey and the World at **Istanbul Gelisim University**. **Things to know about coronavirus are as follows:**

What are the new coronavirus symptoms?

- The most common symptoms are **fever, cough and respiratory distress**.
- In severe cases, **pneumonia, severe respiratory failure, kidney failure and death** may occur
- Incubation period is between **2 and 14 days**.

How is the virus transmitted?

- It can be transmitted by the contact of the droplets caused by **coughing and sneezing** with the contact of the **mouth, nose and eyes** of other individuals in certain environment and by touching the surfaces where the droplets adhere and taking hands **into the mouth, nose or eyes**.

What to do to be protected from the virus?

- When **coughing or sneezing**, the mouth and nose should be covered with a **disposable tissue**, if there is no handkerchief, the mouth should be closed with the **upper sleeve or elbow**, not with the palms.
- **Handshaking and hugging** should be avoided.
- **Mouth, nose and eyes** should not be touched with dirty hands.
- Hands must be washed for **at least 20 seconds** in accordance with the **Handwashing Instructions** found in the toilets. In the absence of water and soap, **alcohol-containing hand antiseptics** should be used. **Cologne of 70-80 degrees** also serve as disinfectants.
- Offices and classrooms must be **ventilated hourly**.
- Places frequently used by many people such as common areas and door handles should be **disinfected every 2 hours**.
- Hands **must be washed** after using **public transportation**.
- Because the virus progresses faster in people with low immune system; **a balanced and healthy diet** is required. Foods **must be washed thoroughly** before consumption.

What to do if there are symptoms?

- If you have come from countries with infections **in the past 14 days**, apply to the **nearest healthcare facility** by wearing a **surgical mask**.
- If you are **coughing, have a fever and have difficulty at breathing**, apply to the **nearest healthcare facility** by wearing a **surgical mask**.
- **Always wear your mask** when you are in the same room with **a person who is recommended insulation** at home.

PROTECTION AGAINST VIRUS IS IN OUR HANDS

THE MOUTH AND NOSE SHOULD BE CLOSED WITH PAPER TOWEL DURING COUGHING AND SNEEZE. IF YOU DO NOT HAVE ANY WIPE, THE INSIDE OF THE ELBOW SHOULD BE USED.

CLOSE CONTACT SHOULD AVOID LIKE HANDSHAKE AND HUGGING.

IT SHOULD BE STAYED AWAY FROM CROWDED ENVIRONMENTS.

DO NOT TOUCH THE MOUTH, NOSE AND EYES WITH DIRTY HANDS.

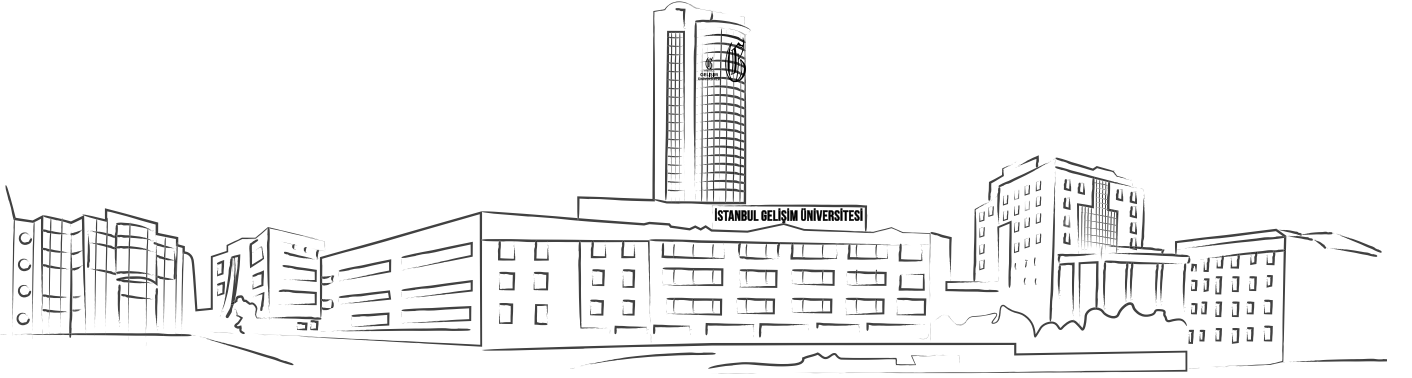

HANDS MUST BE WASHED WITH WATER AND NORMAL SOAP FOR AT LEAST 20 SECONDS.

ALCOHOL CONTENT HAND ANTISEPTICS SHOULD BE USED IN CASE OF THERE IS NO WATER AND SOAP.
